Optimization Results

Results returned by the local Gurobi optimization service

Run status

Status
Completed

Run ID
f998daee-c85a-4b97-8c95-435d51db972e

Solver
gurobi

Termination condition
optimal

Total hydrogen imbalance
516.06 model hydrogen units

Dataset
Johor 118 (bundled)

Message
Optimization completed with an optimal solution.

Download JSON

Input summary

Dataset
Johor 118 (bundled)

Horizon
24 hourly steps

Selected infrastructure
4

Selected solar farms
1

Consumers
3

Consumer demand (kg H2/day)
516.06

Vehicle templates
9

Railway enabled
true

Hydrogen production

Solar generation (kWh)

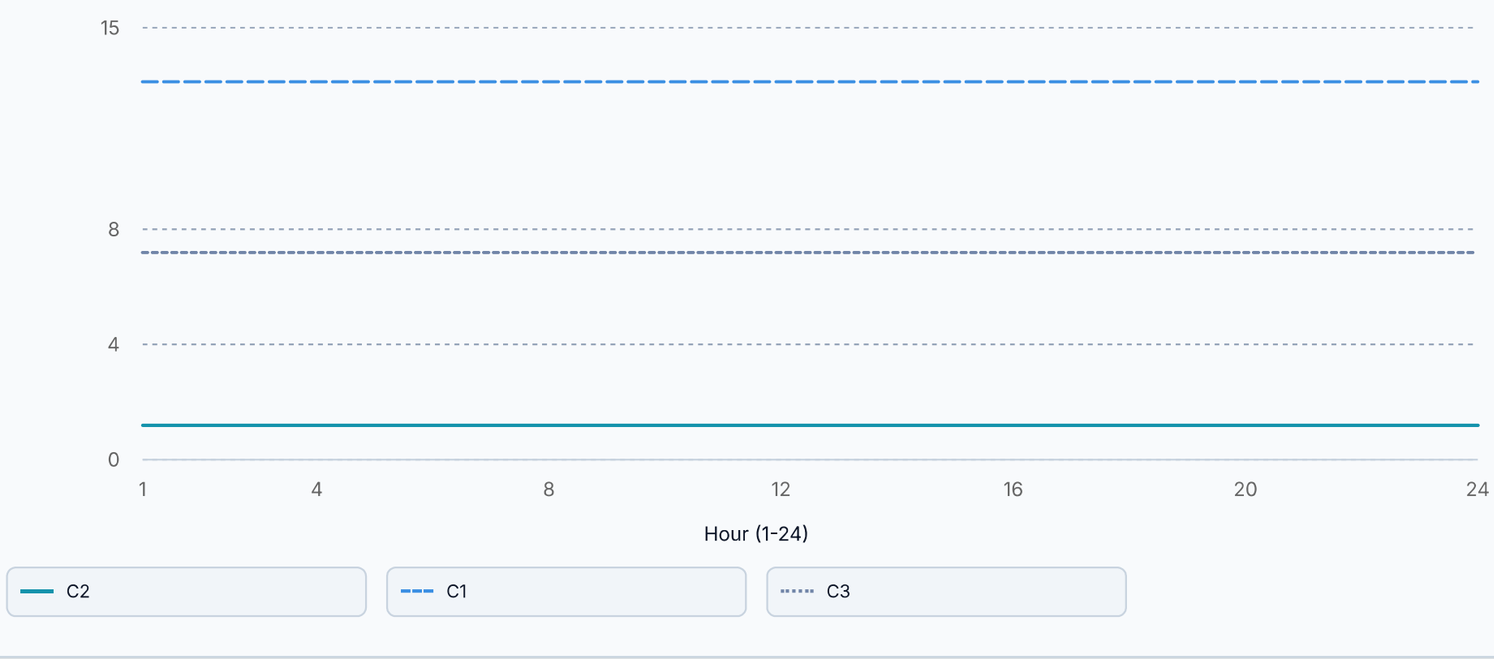

▶ Chart details

Hydrogen flows

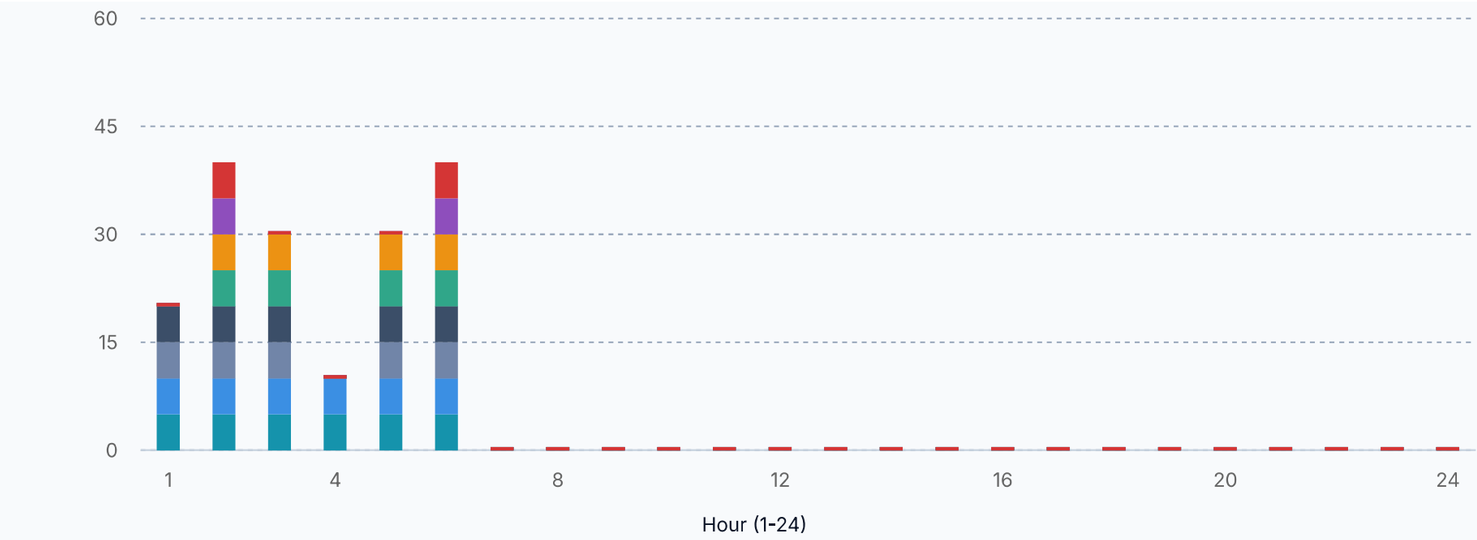

Submitted hydrogen demand (kg H2/hour)

▶ Chart details

Hydrogen pipeline outflow (kg H2/hour)

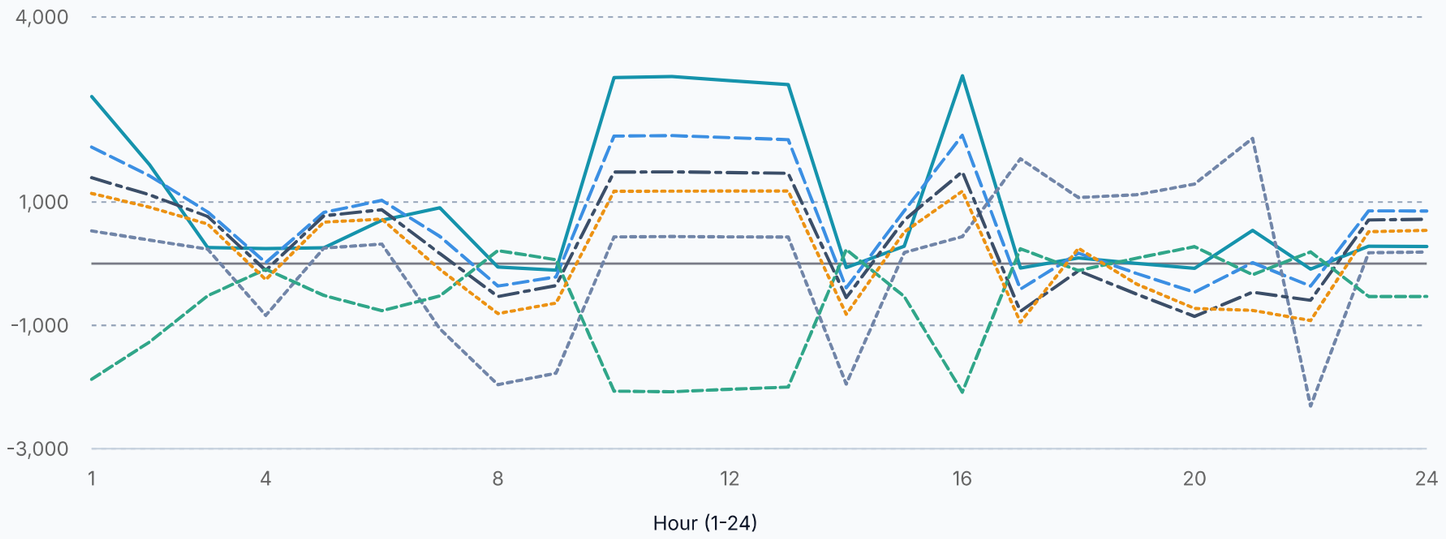

▶ Chart details

Bars are centred on each hourly bin and stacked to show the total activity and its composition. Hover over an hour for individual values.

Electrical line flow (model electrical units)

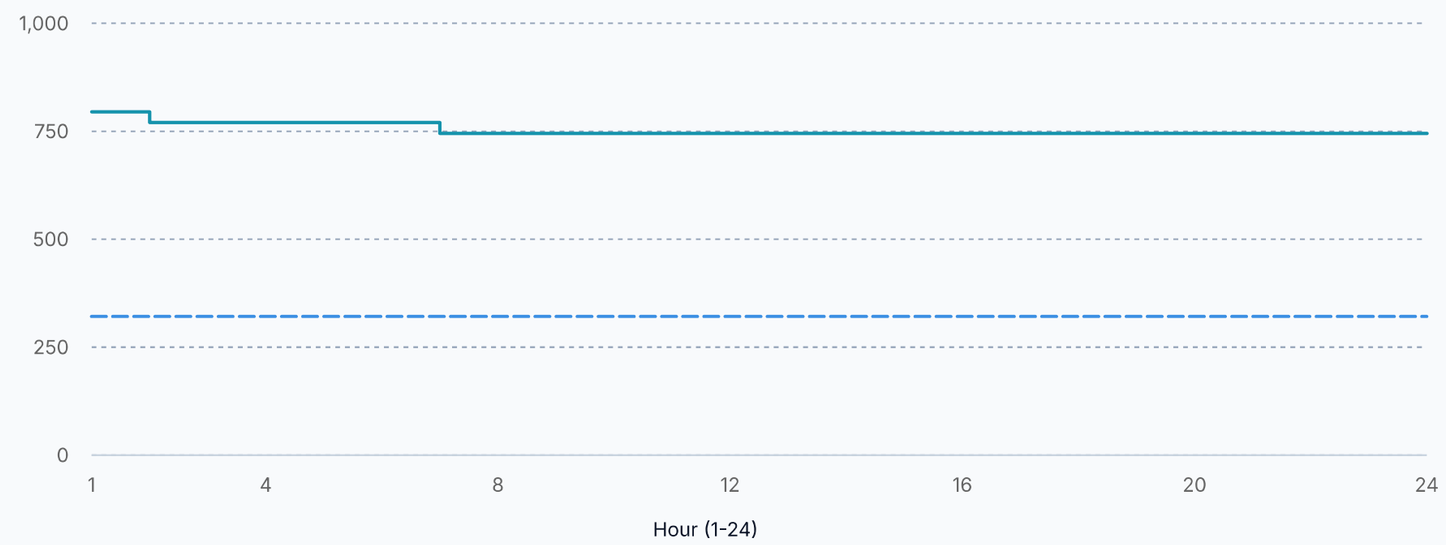

▶ Chart details

Infrastructure utilization

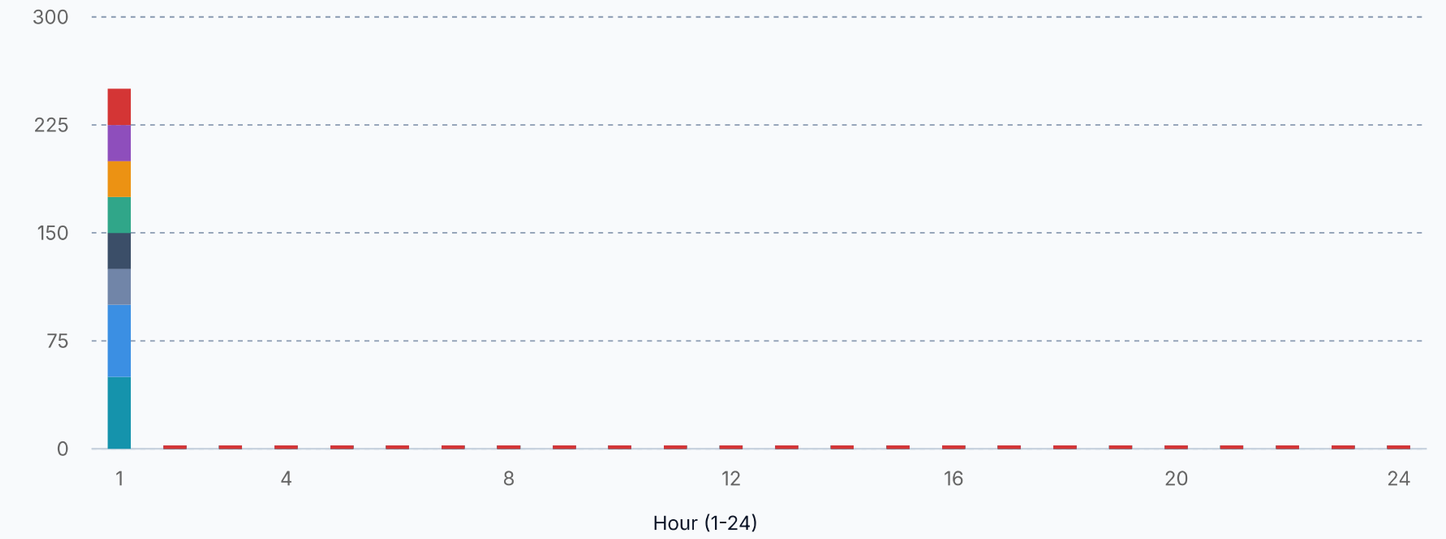

Plant inventories (model mass units)

▶ Chart details

Electrical generation (model electrical units)

▶ Chart details

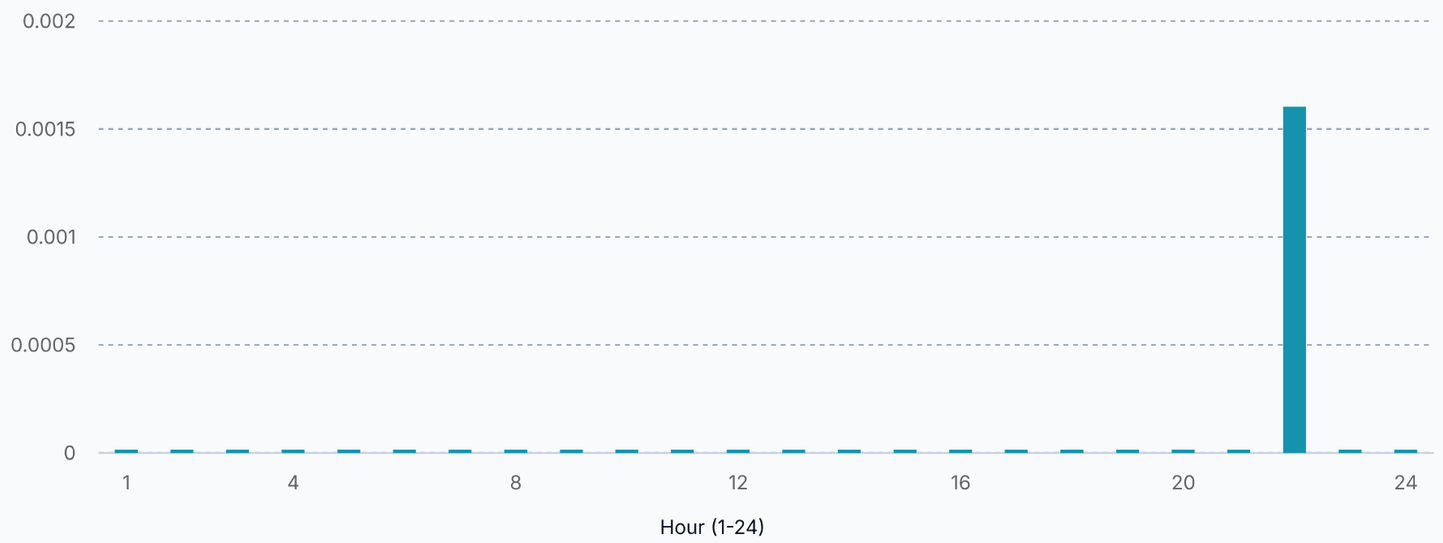

Bars are centred on each hourly bin and stacked to show the total activity and its composition. Hover over an hour for individual values.

Storage

System hydrogen charging (kg H2/hour)

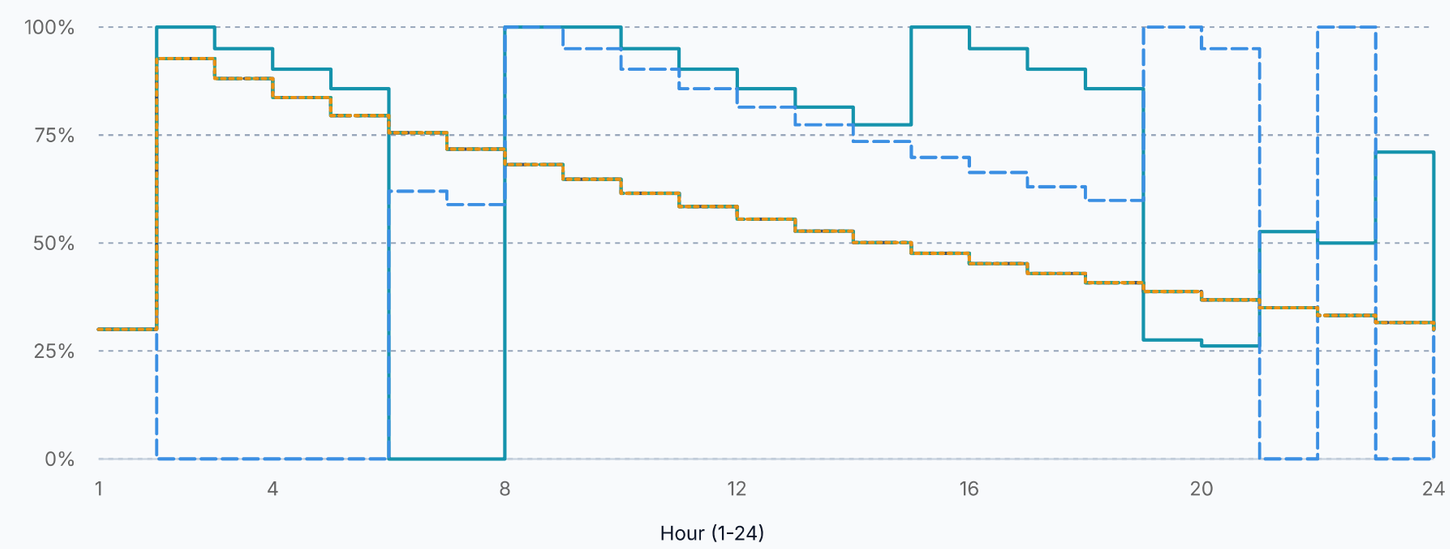

▶ Chart details

Bars are centred on each hourly bin and stacked to show the total activity and its composition. Hover over an hour for individual values.

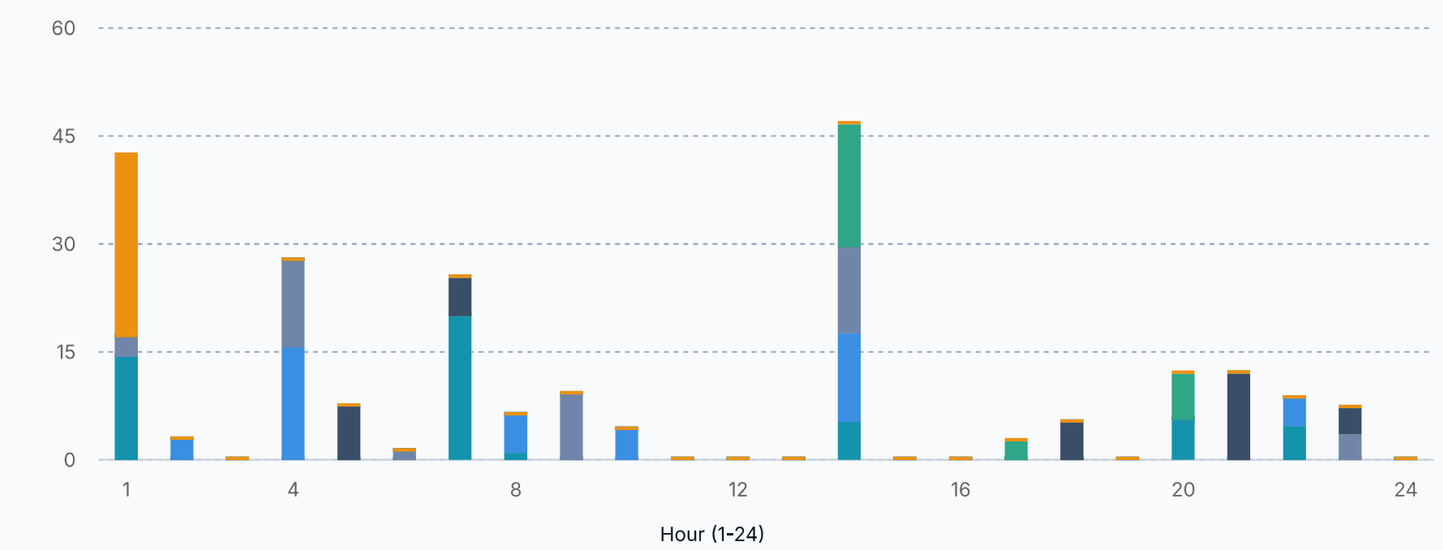

Storage state of charge (fraction of capacity)

▶ Chart details

Storage charging (model storage-flow units)

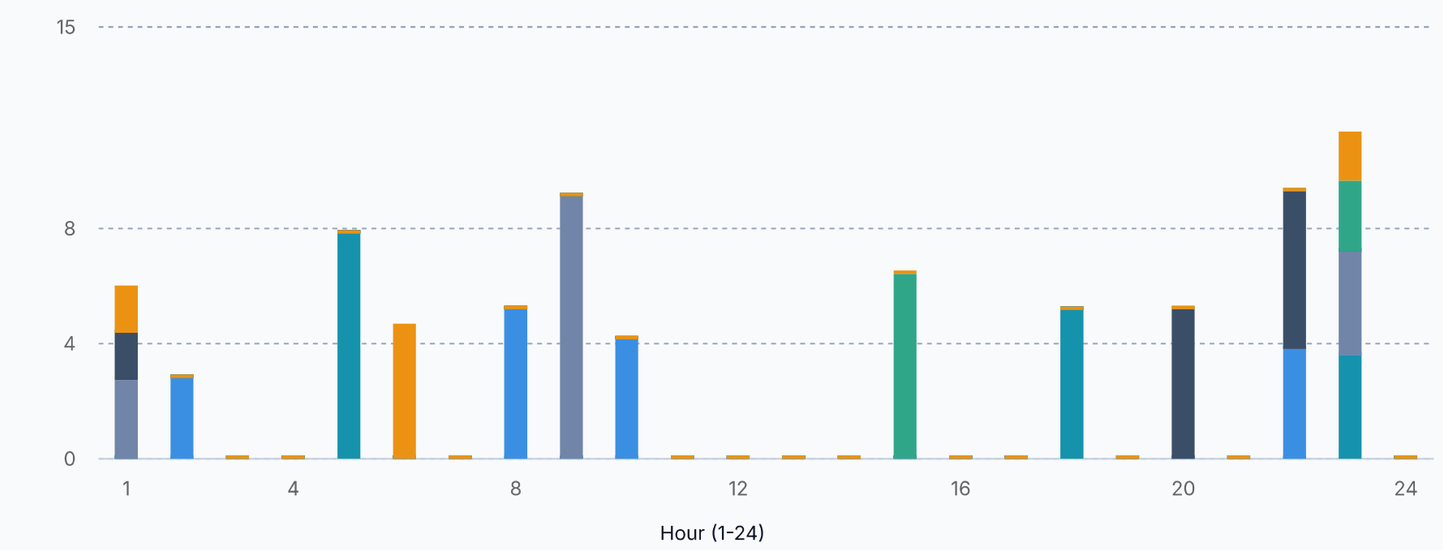

▶ Chart details

Bars are centred on each hourly bin and stacked to show the total activity and its composition. Hover over an hour for individual values.

Storage discharging (model storage-flow units)

▶ Chart details

BESS16 BESS10

Bars are centred on each hourly bin and stacked to show the total activity and its composition. Hover over an hour for individual values.

Transport

Vehicle state of charge or load (fraction of capacity)

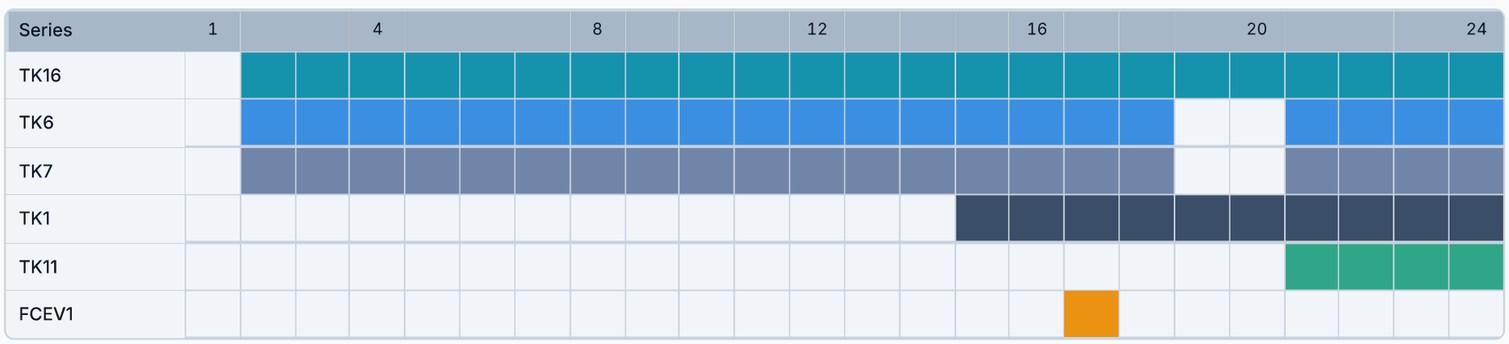

▶ Chart details

BEV2 BEV1 TK1 TK6 TK7 TK11

Vehicles in transit (binary)

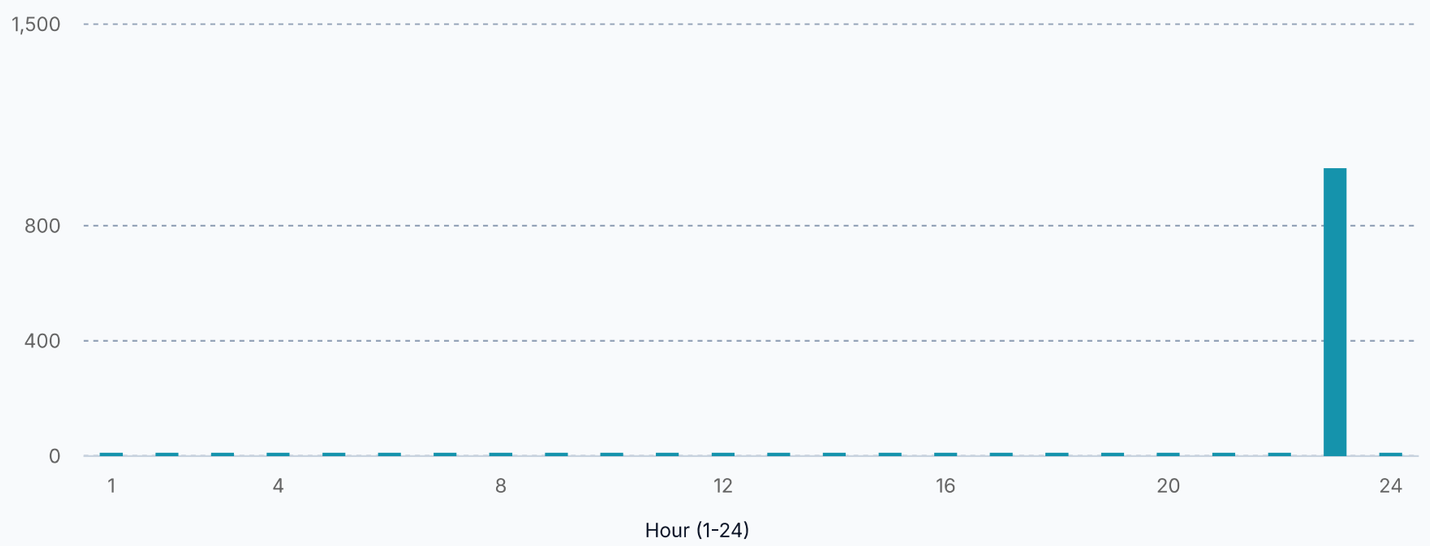

▶ Chart details

Filled cells are active, empty cells are inactive, and hatched cells indicate a missing solver value.

Railway loading (model mass units/hour)

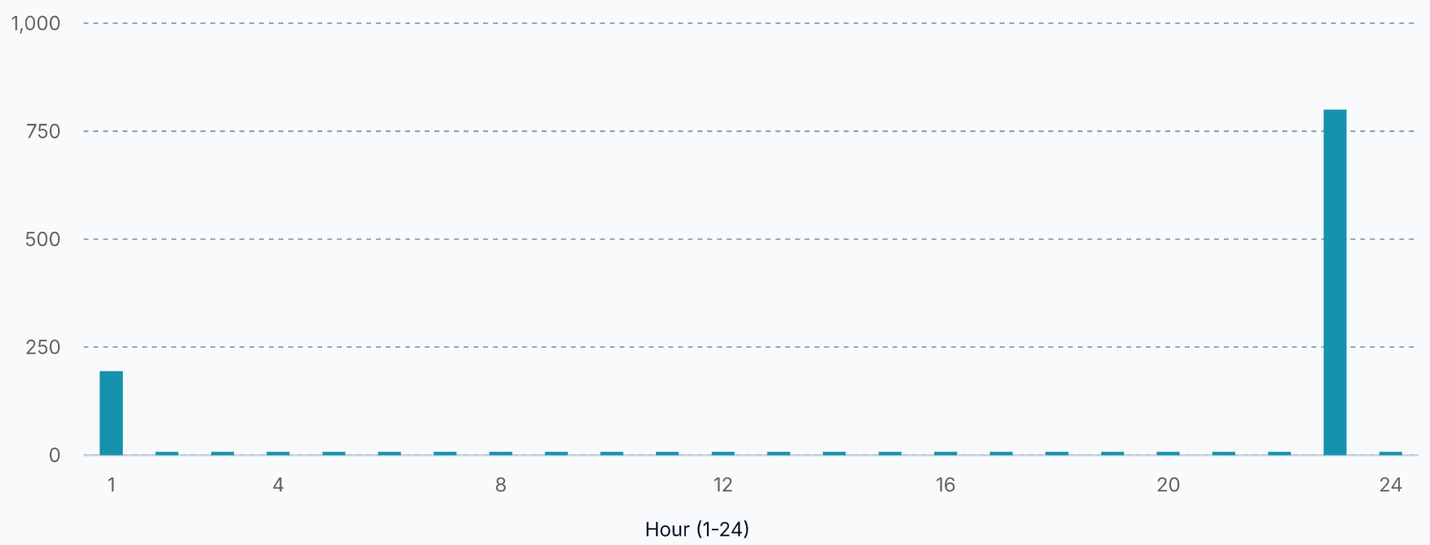

▶ Chart details

Bars are centred on each hourly bin and stacked to show the total activity and its composition. Hover over an hour for individual values.

Railway unloading (model mass units/hour)

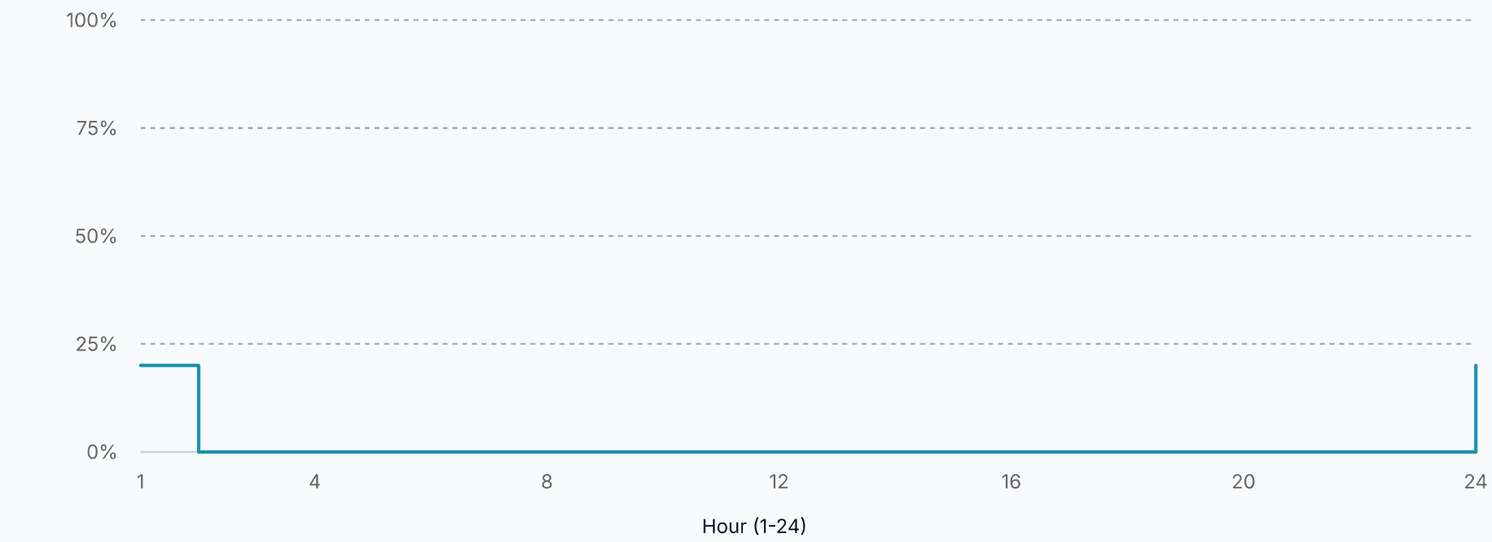

▶ Chart details

Bars are centred on each hourly bin and stacked to show the total activity and its composition. Hover over an hour for individual values.

Railway load state (fraction of capacity)

▶ Chart details

Result tables

Non-zero raw solver variables

Filter rows

CSV

Showing 2,500 of 11,755 non-zero rows. Use the downloaded JSON or API variable filter for additional pages.

Family	Variable	Title	Unit	Indices	Hour	Value
plants	plant_inven	Plant material inventory	model mass units	{"plant":"POM1","material":"POME","hour":1}	1	795.08
plants	plant_inven	Plant material inventory	model mass units	{"plant":"POM1","material":"POME","hour":2}	2	770.0799999999
plants	plant_inven	Plant material inventory	model mass units	{"plant":"POM1","material":"POME","hour":3}	3	770.0799999999
plants	plant_inven	Plant material inventory	model mass units	{"plant":"POM1","material":"POME","hour":4}	4	770.0799999999
